

CMAST Complex Products Task Group

Conference Call Notes

Friday, July 17, 2009

2:00 – 3:30 p.m. EDT

Chair: Sneh Kumar

Participants: Sneh Kumar, Charlie Curcija, Michael Thoman, F. Fisher, Tom Mifflin, and John Lewis (staff)

- 1) Meeting called to order at 2:10 PM
- 2) John Lewis appointed recording secretary
- 3) See the attached PDF file for details on the discussion materials.
 - a) TG discussed the mullion definitions from NFRC 100 and use of those mullions in various products. TG decided to propose modifications to these definitions to reflect the appropriate meaning. Charlie will update the definitions and share with TG.
 - b) TG discussed expansion of NFRC 100 table 4.3 to include additional products and decided against adding products to the standard product list. TG felt it would be better to allow ratings of non-standard products at their custom size and configuration.
 - c) TG identified several areas where technical procedure needs to be developed before these products can be rated. These cases include corner mullion simulation, combined calculation of frames with stiffener or mullion reinforcement.
 - d) TG will continue to discuss proposals on complex products from Charlie in the next meeting.
- 4) Next conference call schedule for August 28, 2009 @ 2:00 PM EDT.
- 5) Meeting adjourned at 3:30 PM.
