

Notes

TDD TG – Tucson Membership Meetings

March 2, 2009

TG start: 10:30 am

Dave De Block TG chair welcomed all, reviewed anti-trust and agenda. He did not ask for a scribe so these come from the depths of his memory.

U-factor

Mike Thoman reported on continuing work to resolve test issues.

Research attic conditions may have been “floating”, causing the changes found in testing of identical samples, using the certified zero attic method. Plans are to run more samples and provide a full report at our next meeting. In addition, calibration methodology has undergone changes and the effects of these changes will be reported on at the next meeting.

VT research

The complex VT request for service funding was discussed and must be brought to Research for approval. (this did happen)

TDD manufacturers do not agree on market data for dome orientation. Solar orientation will be decided when VT rating is available. Continued discussion is planned.

Meeting continued into Skylight TG as Dave left at 11:05 to chair the 11 am Swinging Door TG
